Re: MM Dkt 99-25 In the Matter of the Creation of a Low Power Radio Service

Dear Ms. Dortch:

Attached please find the signatures of 38 people — residents of Arkansas — in support of two important components of the Federal Communications Commission's Notice of Proposed Rulemaking regarding the future of the Low Power FM (LPFM) service.

In many communities, the demand for stations far exceeds the number of available frequencies. To best serve the diverse needs of local communities, the FCC should adopt rules and policies that maximize the number of LPFM stations that can go on the air. For example, by allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double.

In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio.

Respectfully submitted,

_____/s/_____

FCC Chairman Julius Genachowski
FCC Commissioner Mignon Clyburn
FCC Commissioner Robert M. McDowell

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Vivian Michael, Bella Vista, AR

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require "ALL" LPFM stations to broadcast a minimum amount of locally originated programming each week. We need to make sure that we have REAL Local Stations, not repeaters for nationwide special interest, political and religion based groups. Do not get me wrong those groups have a right to be heard and I support there right to be heard. I however think it is critical that we keep big money out of local radio by making sure that a Local station has the local population involved in the production of the programming broadcast on local radio. If you require that a local station use primarily local originated programming, it will slow down the use of local radio as repeaters for large well funded groups trying to influence community opinion by masking the programming as local media when it is really part of a larger agenda, professorially produced and monotheistic. We only have a limited number of licenses available in each community — and in larger markets you will have many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Please look hard at how you can help insure that Local Radio is Local Driven, Local Produced and helps to assure that the programming is locally driven. Thank you.
